Second Sprint Recap

Team 91 (Food Chaser)

Shuai Shao(shuaisha), Xing Chen(xingc), Huiwen Zhang(huiwenz), Tianyuan Ding(tding)

Product Owner: Shuai Shao

Phase 1: - should be finished by Wednesday **(Most of the tasks were done on time except for the not completed ones)**

In this phase, we will finish up the fundamental features left from sprint 1:

- Save recipe drafts **(Not completed - due to this member's time management issue)**
    - User should be able to save a half written recipe and come back to it.
- Edit recipe **(Not completed - due to this member's time management issue)**
- Delete recipe **(Completed)**
- Favorite recipe **(Completed)**
    - User should be able to favorite a recipe and view it in user's favorites.
- Implement corresponding additional html files and profile pages **(Completed)**
- Modify UI according to feedbacks from Sprint One presentation **(Completed)**
- Enable adding multiple steps and ingredients **(Completed)**
    - Multiple steps and ingredients should be able to be added and submitted in request.
- Taste preference **(Completed)**
    - User should be able to set their taste preference.
- Fixes on third-party log in **(Buggy - due to problem with API permission level setup)**

Phase 2: - should be finished by Saturday **(Most of the tasks were done on time except for the not completed ones)**

In this phase, we will implement some advanced features based on Phase 1.

- Profile viewing and editing for users **(Not completed - due to this member's time management issue)**
- Advanced searching based on category and ingredients **(Completed)**
    - User should be able to search not only by recipe name, but also can specify recipe category and what ingredients are needed.
    - Autocomplete search keyword (recipe)
- Monthly and Seasonal ranking for popular recipes **(Completed)**
    - Top 10 recipes of a week/season will be recommended
- Recipe Suggestion from user inputted ingredients **(Completed)**
    - User should be able to specify ingredients and then suggestion of recipe with those ingredients will be provided.

- Recipe Suggestion from user search history and taste preference **(Not completed - due to this member's time management issue)**
- Recipe Set suggestion based on user customized scenario **(Not completed - due to dependency issue, specifically due to the unfinished task on recipe suggestion from search history)**
  - User should be able to select some kind of scenario like friends party, business dinner to get a set of recipes as suggestion
- Recipe menu planner **(Completed)**
  - User should be able to customize its calendar of meals
- User guide page **(Completed)**

Phase 3: - should be finished by Sunday

In this phase, we will improve UI features and learn about AWS hosting. All team members should be responsible for this phase. **(Because not every member is able to stick with the phase deadlines, therefore we spent the last few hours to integrate the work together.)**

Color represents the distribution of work.
